NEW GENERATION P-SERIES**

**PEII / PGII / PAII / PSII / PNII / PD / PL**

**PEIIR / PGIIR / PAIIR / PSIIR / PNIIR / PDR / PLR**

# New Generation P Series

## ► Features:

- Economic
- High efficiency
- Low noise
- Reduced backlash
- Optimized Inertia moment
- Limited temperature rise
- Long service life
- Flexible mounting diameters
- Minimized size and weight

The perfect servo planetary gearbox !  
 The brand new APEX PII / PIIR series.  
 The PII / PIIR series is an economic high precision planetary gearbox with excellent performance and quality. Our innovative PII / PIIR series design features minimal size, light weight and high efficiency.

# ORDERING CODE

**PEII 090** — **010<sup>(1)</sup>** — **( )<sup>(2)</sup>** / **MOTOR**

**PEIIR 090** — **010<sup>(1)</sup>** — **( )<sup>(2)</sup>** / **MOTOR**

Motor Type :  
Manufacturer and Model

Ratio<sup>(1)</sup>:

1-stage: 3, 4, 5, 7, 9<sup>(3)</sup>, 10

2-stage: 12<sup>(5)</sup>, 15, 16, 20, 25, 30, 35, 40, 50, 70, 81<sup>(3)</sup>, 100

3-stage<sup>(4)</sup>: 120, 160, 200, 280, 350, 500, 700, 1000

## Gearbox Size:

PEII : PEII 050, PEII 070, PEII 090, PEII 120, PEII 155

PGII : PGII 040, PGII 060, PGII 080, PGII 120, PGII 160

PAII : PAII 042, PAII 060, PAII 090, PAII 115, PAII 142

PSII : PSII A, PSII B, PSII C, PSII D, PSII E

PNII : PNII 017, PNII 023, PNII 034, PNII 042, PNII 056

PD : PD 053, PD 064, PD 090, PD 110

PL : PL 070, PL 090, PL 120,

Ordering Example : PEII 090 - 010 / SIEMENS 1FT6 041 - 4AF71  
PAII 090 - 010 - S1 / SIEMENS 1FT6 041 - 4AF71

## Gearbox Size:

PEIIR : PEIIR 050, PEIIR 070, PEIIR 090, PEIIR 120, PEIIR 155

PGIIR : PGIIR 040, PGIIR 060, PGIIR 080, PGIIR 120, PGIIR 160

PAIIR : PAIIR 042, PAIIR 060, PAIIR 090, PAIIR 115, PAIIR 142

PSIIR : PSIIR A, PSIIR B, PSIIR C, PSIIR D, PSIIR E

PNIIR : PNIIR 017, PNIIR 023, PNIIR 034, PNIIR 042, PNIIR 056

PDR : PDR 053, PDR 064, PDR 090, PDR 110

PLR : PLR 070, PLR 090, PLR 120

Ordering Example : PEIIR 090 - 010 / SIEMENS 1FT6 041 - 4AF71  
PAIIR 090 - 010 - S1 / SIEMENS 1FT6 041 - 4AF71

(1) Ratio ( $i = N_{in} / N_{out}$ ).

(2) S1 = Smooth Output Shaft. S1 shaft is only provided for PAII / PAIIR series.

S2 = Output Shaft with Key. This is the standard shaft for PII / PIIR gearbox.

(3) Only provided for PSII/PSIIR and PAII/PAIIR series.

(4) Only provided for PGII and PGIIR series.

(5) Only provided for PL and PLR series.

# Permitted Radial And Axial Loads<sup>(B)</sup>

If radial force  $F_{zr}$  is not exerted on the center of the output shaft  $X < 1/2 L$  or  $X > 1/2 L$ , the permitted radial and axial loads can be calculated by the position load factor  $K_s$  on the above diagram.

Permitted radial load  $F_{zr}$  on center of output shaft  $X = 1/2 L$  for various output speeds.

(A)  $\varnothing$  = Input shaft diameter.

(B) Permitted loading values on the output shaft. Please refer to P. 33 glossary.

# Permitted Radial And Axial Loads<sup>(B)</sup>

If radial force  $F_{2r}$  is not exerted on the center of the output shaft  $X < 1/2 L$  or  $X > 1/2 L$ , the permitted radial and axial loads can be calculated by the position load factor  $K_s$  on the above diagram.

Permitted radial load  $F_{2r}$  on center of output shaft  $X = 1/2 L$  for various output speeds.

(A)  $\varnothing$  = Input shaft diameter.

(B) Permitted loading values on the output shaft. Please refer to P. 33 glossary.

# Permitted Radial And Axial Loads<sup>(B)</sup>

If radial force  $F_{zr}$  is not exerted on the center of the output shaft  $X < 1/2 L$  or  $X > 1/2 L$ , the permitted radial and axial loads can be calculated by the position load factor  $K_s$  on the above diagram.

Permitted radial load  $F_{zr}$  on center of output shaft  $X = 1/2 L$  for various output speeds.

(A)  $\varnothing$  = Input shaft diameter.

(B) Permitted loading values on the output shaft. Please refer to P. 33 glossary.

(1) Ratio ( $i = N_{in} / N_{out}$ ).

(2) Backlash is measured at 2% of Nominal Output Torque T<sub>2N</sub>.

(3) Applied to the output shaft center at 100 rpm.

(4) The dB values are measured by gearbox with ratio 10 (1-stage) or ratio 100 (2-stage), no loading at 3,000 RPM or at the respective Nominal Input Speed by bigger model size.

By lower ratio and/or higher RPM, the noise level could be 3 to 5 dB higher.

(5) Max. motor weight\* (kg) =  $\frac{0.1 \times Mb}{\text{motor length (m)}}$

\*with symmetrically distributed motor weight

\*with horizontal and stationary mounting

## PULLEY ORDERING CODE

**PUL070<sup>(1)</sup> — AT05<sup>(2)</sup> — B<sup>(3)</sup>**

**Pulley size corresponds to gearbox size:**

**PUL 070: PL 070, PLR 070**

**PUL 090: PL 090, PLR 090**

**PUL 120: PL 120, PLR 120**

**Ordering Example : PUL 070 - AT05 - B  
PUL 090 - 8YU - N**

(1) Pulley size.

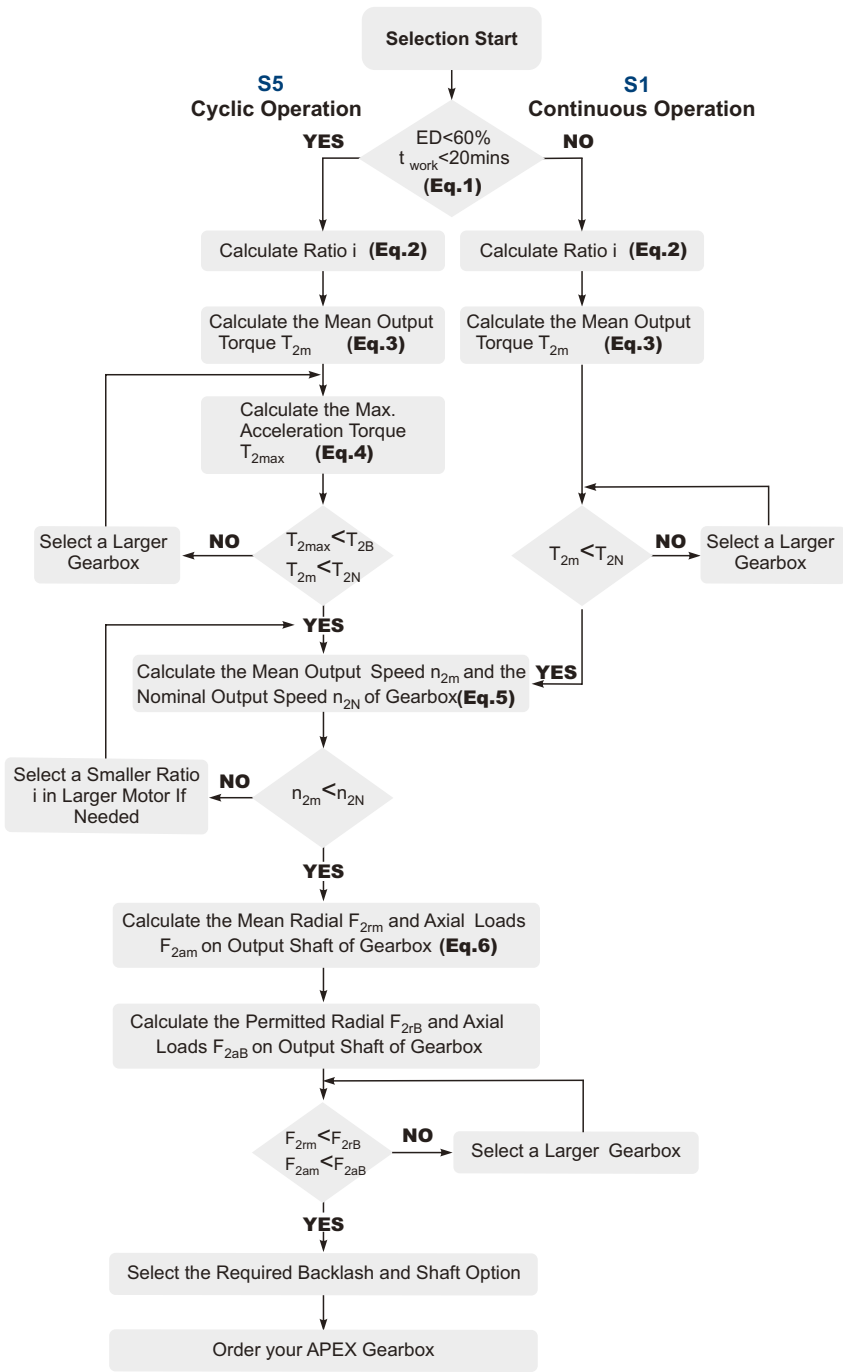

(2) Pulley specification.

(3) Pulley appearance. B = Manganese phosphate blackening (Standard)

N = Nickel plating

# Selection of the optimum gearbox

**Recommended (for S5 Cycle Operation)**

The general design is given for

$$\frac{J_L}{i^2} \leq 4 \times J_m$$

The optimal design is given for

$$\frac{J_L}{i^2} \cong J_m$$

$J_L$  Load Inertia

$J_m$  Motor Inertia

$$1. ED = \frac{t_a + t_c + t_d}{t_{cycle}} \times 100\%, t_{work} = t_a + t_c + t_d$$

Index : a. Acceleration, c. Constant, d. Deceleration, p. Pause

(Eq.1)

$$2. i \cong \frac{n_m}{n_{work}}$$

$n_m$  Output Speed of the Motor

$n_{work}$  Working Speed

(Eq.2)

$$3. T_{2m} = 3 \sqrt{\frac{n_{2a} \times t_a \times T_{2aa}^3 + n_{2c} \times t_c \times T_{2ac}^3 + n_{2d} \times t_d \times T_{2ad}^3}{n_{2a} \times t_a + n_{2c} \times t_c + n_{2d} \times t_d}}$$

(Eq.3)

$$4. T_{2max} = T_{mB} \times i \times K_s \times \eta$$

where  $K_s$  is

$K_s$	No. of Cycles / hr
1.0	0 ~ 1,000
1.1	1,000 ~ 1,500
1.3	1,500 ~ 2,000
1.6	2,000 ~ 3,000
1.8	3,000 ~ 5,000

$T_{mB}$  Max. Output Torque of the Motor

$\eta$  Efficiency of the Gearbox

(Eq.4)

$$5. n_{2a} = n_{2d} = \frac{1}{2} \times n_{2c}$$

$$n_{2m} = \frac{n_{2a} \times t_a + n_{2c} \times t_c + n_{2d} \times t_d}{t_a + t_c + t_d}$$

$$n_{2N} = \frac{n_{1N}}{i}$$

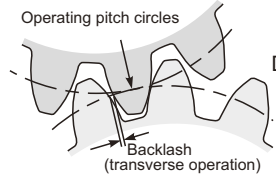

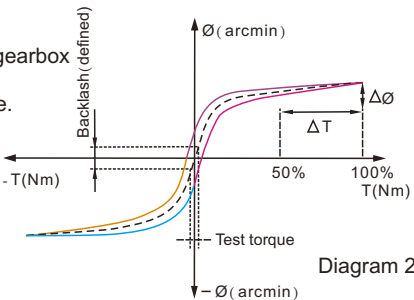

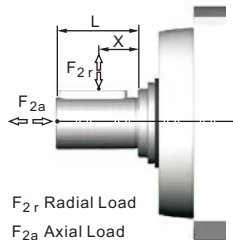

(Eq.5)

$$6. F_{2rm} = 3 \sqrt{\frac{n_{2a} \times t_a \times F_{2ra}^3 + n_{2c} \times t_c \times F_{2rc}^3 + n_{2d} \times t_d \times F_{2rd}^3}{n_{2a} \times t_a + n_{2c} \times t_c + n_{2d} \times t_d}}$$

$$F_{2am} = 3 \sqrt{\frac{n_{2a} \times t_a \times F_{2aa}^3 + n_{2c} \times t_c \times F_{2ac}^3 + n_{2d} \times t_d \times F_{2ad}^3}{n_{2a} \times t_a + n_{2c} \times t_c + n_{2d} \times t_d}}$$

(Eq.6)

# Glossary

Emergency Stop Torque $T_{2NOT}$	Nm	The Emergency Stop Torque is the maximum permitted torque at the output of gearbox. This may happen only occasionally and may not exceed 1,000 times during the whole service life.
Max. Acceleration Torque $T_{2B}$	Nm	Under the Cyclic Operation (S5), the Max. Acceleration Torque is the maximum torque which can be transmitted only briefly to the output of gearbox up to 1,000 cycles/hr.
No Load Running Torque	Nm	The No Load Running Torque is the min. torque to overcome the internal friction of a gearbox without loading*.
Nominal Input Speed $n_{1N}$	rpm	The Nominal Input Speed is the permitted input speed of gearbox by the Continuous Operation (S1) while the housing temperature does not exceed 90°C. This value is measured at environment temperature 25°C.
Max. Input Speed $n_{1B}$	rpm	The Max. Input Speed is the max. permitted input speed of gearbox by the Cyclic operation (S5). This value is measured at environment temperature 25°C and serves as the absolute limit of the gearbox.
Backlash	arcmin	<p>The Backlash is the maximum angular measurement between two teeth of gears when the transverse operation occurs (refer to Diagram 1). The arcmin is the measurement unit for the backlash. One arcmin equals 1/60 degree, symbolized as 1'.</p>  <p style="text-align: right;">Diagram 1</p>
Torsional Rigidity	Nm/arcmin	<p>Torsional Rigidity is the quotient (<math>\Delta T / \Delta \theta</math>) between the applied torque and resulting torsion angle. This value indicates how much torque is needed on the gearbox to rotate the output shaft for 1 arcmin. The Torsional Rigidity can be determined by Hysteresis Curve.</p> <p><b>Hysteresis Curve</b> When the input shaft is locked, increase torque at the output slowly up to <math>T_{2B}</math> in both directions and then release the torque gradually. According to the measured torque and torsion angle, a closed curve will be acquired as in the Diagram 2.</p>  <p style="text-align: right;">Diagram 2</p>
Radial Load And Axial Load	N	<p>The permitted radial and axial loads on output shaft of the gearbox depend on the design of the gearbox supporting bearings.</p>  <p style="text-align: center;"><math>F_{2r}</math> Radial Load <math>F_{2a}</math> Axial Load</p>
Efficiency $\eta$	%	The transmission efficiency of the gears inside a gearbox (without friction).
Operating Temperature	°C	The Operating Temperature indicates the temperature of gearbox housing.
Degree of Protection		IP code stands for International Protection standard. The IP65 as example: the first IP number stands for protection degree against dust; the second IP number stands for protection against liquid.
Lubrication		APEX uses synthetic lubrication grease. Alternate greases are available, please contact APEX.
Running Noise	dB(A)	The Running Noise is measured depends on gearbox size, the ratio and the speed*. Higher speed usually induces higher noise level, while higher ratio induces lower noise level.
Moment of Inertia $J_1$	kg.cm <sup>2</sup>	The Moment of Inertia $J_1$ is a measurement of the effort applied to an object to maintain its momentary condition at rest or rotating.
Breakaway Torque	Nm	The Breakaway Torque is the minimum torque to start the rotation from the input side of gearbox. A smaller size or a higher ratio gearbox requests less Breakaway Torque.
Back Driving Torque	Nm	The Back Driving Torque is the minimum torque to start the rotation from the output side of gearbox. A larger size or a higher ratio gearbox requires greater Back Driving Torque.

\* This value is measured at environment temperature 25°C and the input speed 3,000 rpm. If the Nominal Input Speed  $n_{1N}$  of gearbox is over 3,000 rpm, this value is measured by that specific Nominal Input Speed.
